3. Claim rejection(s) under 35 USC 102 and 103 in the previous Office Action (Paper No. 20080802) is/are removed.

Allowable Subject Matter

4. Claims 1-2, 4-6 and 9-23 are allowed.

5. The following is an examiner's statement of reasons for allowance:

The present claims are allowable for at least the following reason(s) over the closest references: Enami (EP 771 862), Murakami (US 4 774 297) and Konings (US 5 371 162)

Enami discloses an adhesive tape containing a support film and a pressure sensitive adhesive deposited thereon where the pressure sensitive adhesive comprises A) a reaction product of a) a rubber-like polydiorganosiloxane containing both alkenyl and hydroxyl groups and b) a hydroxyl or alkoxy group-containing MQ resin, B) a hydrogen atom-containing polydiorganosiloxane, and C) a platinum catalyst. (page 2, line 39 to page 3, line 4, page 5, lines 32-38 and Examples) The molar ratio of Si-H to Si-alkenyl and that of M unit to Q unit are described in page 3, lines 25-44 and page 5, lines 4-8. An amine (e.g., **benzylamine**) is further employed for facilitating the reaction between ingredients a) and b) in an amount illustrated in page 3, line 47 to page 4, line 7. The adhesive can optionally contain unreacted ingredients a) and b) and/or a solvent. (page 3, lines 27-29 and page 5, lines 20-31) A curing reaction adjustor can also be used. (page 5, lines 20-31) However, Enami does not teach or fairly suggest the claimed **polysiloxane containing aromatic amine** group.

Murakami discloses an adhesive tape containing a support film and a pressure sensitive adhesive deposited thereon where the pressure sensitive adhesive comprises A) an alkenyl-containing silicone gum, B) an MQ resin with specific M/Q molar ratio, C) an organohydrogenpolysiloxane, D) a platinum catalyst, a solvent and optionally an addition-reaction inhibitor. (col. 1, line 57 to col. 4, line

20, col. 4, lines 11-20 and 26-33 and Examples) The molar ratio of Si-H to Si-alkenyl is described in col. 3, lines 50-52. Murakami further teaches that the presence of a stabilizer is desirable. (col. 4, lines 21-25) Murakami is silent on a specific stabilizer to be used. However, Konings teaches, in an addition-curable adhesive composition, a stabilizer represented by formula (F11) that can be a primary or a secondary **amine** where R can be an aryl group exemplified as a **phenyl** group. (col. 1, lines 5-12, col. 4, lines 15-21 and col. 10, lines 22-52) The motivation of the employment of the amine is to afford a composition with sufficient stability upon exposure to elevated temperatures. (col. 11, line 67 to col. 12, line 16) In light of the benefit, it would have been obvious at the time the invention was made to incorporate Konings' **aromatic amine** as a stabilizer into Murakami's adhesive with expected success. However, Murakami in view of Konings does not teach or fairly suggest the claimed **polysiloxane** containing **aromatic amine** group.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
